PROFESSIONAL SUMMARY

Analytical Systems Builder with 7+ years of experience across business operations, cost and profitability control, commercial analysis, process improvement, ERP governance, and operational analytics in heavy equipment, manufacturing, and engineering-services environments. Experienced in translating complex business processes into practical controls, reporting, workflows, and decision-support systems across operations, finance, commercial teams, ERP systems, and management. Strong in Excel, Google Sheets, Looker Studio, Odoo 16, and SAP ECC6, with developing capability in SQL, PostgreSQL, Python, Git/GitHub, and AI-assisted workflows.

CORE SKILLS

Business Operations & Improvement: Business Operations, Business Analysis, Process Improvement, Operational Excellence, Cost Control, Profitability Analysis, Performance Management, Workflow Design

ERP & Business Systems: Odoo 16, ERP Governance, Business-Side ERP Ownership, SAP ECC6, ERP Migration, Business Process Mapping, Transaction Validation, Process Documentation

Analytics & Decision Support: Operations Analytics, Business Intelligence, Management Reporting, KPI & Dashboard Logic, Data Reconciliation, Project Profitability, Decision-Support Design

Commercial & Cross-Functional: Commercial Analysis, Pricing Analysis, Procurement Governance, Vendor Management, Executive Support, Cross-Functional Coordination, Stakeholder Management

PROFESSIONAL EXPERIENCE

PT Nobi Putra Angkasa - Karawang, West Java

Expert Staff to VP Operations | September 2024 - Present

- Support VP Operations across Sales, Operations, Procurement, Finance, and Production through profitability and compliance reviews, operational analysis, transaction checks, and cross-functional issue resolution.
- Supported the Scala-to-Odoo 16 migration as a business representative through process validation, transaction and data verification, consultant coordination, user support, and post-go-live continuity.
- Serve as the internal business-side Odoo owner, maintaining ERP governance, validating reporting logic, coordinating process and system issues, and providing first-line process support.
- Authored end-to-end Odoo operating protocols covering sales, procurement, inventory, manufacturing, quality control, accounting, delivery, approval points, business rules, user responsibilities, and exceptions.
- Build management reporting and lead business analysis and reporting design for the Odoo Analytics / Control Tower initiative, defining process relationships, KPI logic, data-validation rules, traceability, and decision-support views with AI-assisted SQL, PostgreSQL, and Python implementation.

PT Cibuni Teknik Sejahtera - Bekasi, West Java

Project Manager / Business Operations | September 2022 - September 2024

- Supported the establishment and day-to-day operations of an engineering and manufacturing business across casting, machining, fabrication, pump services, and trading.
- Managed end-to-end business coordination across quotations, supplier sourcing, procurement, documentation, financial follow-up, workshop activities, manpower coordination, and delivery.
- Coordinated with customers, suppliers, vendors, workshop teams, finance, and management from requirements clarification and sourcing through execution, progress monitoring, and delivery.

PT Traktor Nusantara

Service Profitability & Business Control | February 2022 - August 2022

- Moved into Service Marketing to support commercial activities for extensions, accessories, and additional products or work for tractors, forklifts, and other heavy equipment.
- Sourced and compared external vendors, reviewed supplier costs and commercial conditions, assessed margins, and proposed selling prices within delegated pricing limits, with exceptions escalated for Manager approval.
- Prepared quotations, coordinated internal commercial approvals, and monitored vendor purchase orders and execution progress through vendor-side handoff; customer-side follow-up remained with Sales.

PT Traktor Nusantara

Cost Control Analyst | April 2019 - January 2022

- Supported divisional business control across 17 service branches and approximately IDR 11-15 billion in monthly revenue; produced and presented weekly cost-of-revenue, Gross Profit, cost-reduction, and profitability reviews as part of KPI monitoring.
- Participated in month-end closing as a business-side counterpart to Accounting, reviewing unexpected journal postings and internal cost allocations, investigating mispostings, supporting accrual decisions, and explaining unusual Gross Profit movements to management.
- Served as a pre-management commercial control layer for approximately 3-5 purchase requests per working day and built a centralized Google Forms, Google Sheets, and Apps Script workflow for profitability review, supporting documents, approval flow, and transaction-document controls.
- Developed and presented a manager-sponsored diagnostic cost model for a Full Maintenance Contract portfolio generating approximately IDR 8-10 billion in monthly revenue, showing that several ongoing contracts could be unprofitable under the fixed 20% cost assumption.
- Implemented a centralized RFID-based fuel-payment and monitoring process for approximately 40 vehicles and around IDR 50 million in monthly usage, using vehicle and odometer records for reasonableness checks.
- Built workforce-capacity analysis and supported maintenance replacement controls and physical-to-system inventory reconciliation, including investigation of discrepancies involving approximately IDR 10-20 billion in system-recorded inventory value without primary ownership of the overall investigation.

SELECTED PROJECTS

Odoo Analytics / Control Tower

- Business-led ERP analytics and process-intelligence initiative translating Odoo 16 flows across Sales, Procurement, Manufacturing, Inventory, Delivery, Accounting, and Payment into traceable management information.
- Define process relationships, KPI and reporting logic, transaction traceability, validation and exception rules, and management decision-support views while directing AI-assisted SQL, PostgreSQL, Python, and frontend implementation.
